Cookbook for R - Graphs Graphs My book about data visualization in R is available! The book covers many of the same topics as the Graphs and Data Manipulation sections of this website, but it goes into more depth and covers a broader range of techniques. Plotting distributions (ggplot2) - cookbook-r.com Histogram and density plots. The qplot function is supposed make the same graphs as ggplot, but with a simpler syntax. However, in practice, itâ€™s often easier to just use ggplot because the options for qplot can be more confusing to use. Bar and line graphs (ggplot2) - cookbook-r.com Line graphs. For line graphs, the data points must be grouped so that it knows which points to connect. In this case, it is simple â€" all points should be connected, so group=1.

Axes (ggplot2) - Cookbook for R Setting tick mark labels. For discrete variables, the tick mark labels are taken directly from levels of the factor. However, sometimes the factor levels have short names that arenâ€™t suitable for presentation. Cookbook: ggplot | CINF 401 > p <-ggplot (movies) + geom_histogram (aes (x = rating)) + scale_x_continuous ("Avg. rating (0-10)") + scale_y_continuous ("Count of movies with rating") > ggsave ("plot-movies-histogram.png", p, width = 6, height = 4, dpi = 100) stat_bin: binwidth defaulted to range / 30. Legends (ggplot2) - Cookbook for R The legend title â€œExperimental Condtionâ€• is long and it might look better if it were broken into two lines, but this doesnâ€™t work very well with this method, since you would have to put a newline character in the name of the column.

ggplot2: Cheatsheet for Visualizing Distributions | R-bloggers In the third and last of the ggplot series, this post will go over interesting ways to visualize the distribution of your data. Quick-R: ggplot2 Graphs - statmethods.net Graphics with ggplot2 The ggplot2 package, created by Hadley Wickham, offers a powerful graphics language for creating elegant and complex plots. Its popularity in the R community has exploded in recent years. Facets (ggplot2) - Cookbook for R facet_grid. The data can be split up by one or two variables that vary on the horizontal and/or vertical direction. This is done by giving a formula to facet_grid(), of the form vertical ~ horizontal.
